## Rescue, Care and cure

**Present number of animals under treatment- 90**

# RESCUE AND TREATMENT- 81

In October 2023, Bark India Charitable Trust rescued and treated 81 stray animals found in dire conditions across Pondicherry. These animals were suffering from a range of issues, including severe wounds, debilitating illnesses, painful fractures, and maggot infestations. Each case was met with immediate medical intervention, from cleaning and suturing wounds to managing infections and setting fractures.

The dedicated team at the rescue center worked around the clock, ensuring every animal received the compassionate care they needed to heal and recover. Through these efforts, Bark India continues to uphold its mission of alleviating animal suffering and promoting welfare in the community.

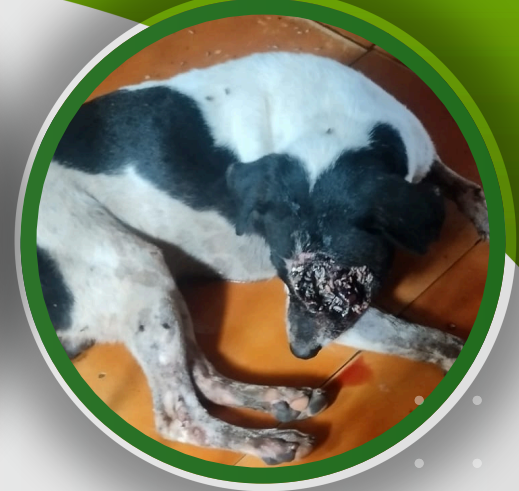

Dog with TVT

Paraplegic puppy

Hematoma

Face myiasis

Canine Distemper

Back wounded

Leg fracture

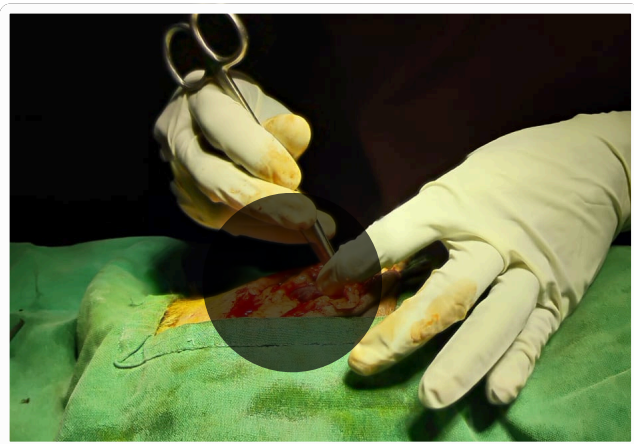

Ultra sound physiotherapy to one of the rescued puppies with spinal injury

# Veterinary Surgeries-58

In October 2024, Bark India conducted 16 veterinary surgeries to improve the lives of stray animals. The procedures ranged from basic surgeries like hematoma treatments to essential spaying and neutering of rescued animals. Additionally, the team performed life-saving surgeries, including tumor removals and fracture pinning, ensuring these animals received the critical care they needed.

Each surgery aimed to enhance the quality of life and increase the chances of adoption for these vulnerable animals, reflecting Bark India's ongoing commitment to animal welfare and creating a safer, healthier environment for strays.
